

To Whom it may concern,

## **We wish to announce cutting edge new proprietary energy generating technology, we have branded as domestic Major Appliance Power Stations (“MAPS”) Devices that deliver outstanding USP:**

- ⊕ Eliminates the use of the National Grids, both power and gas, 100% “Off-Grid”.
- ⊕ Installed in households and SME directly
- ⊕ Including charging the family’s electric cars
- ⊕ Generates electricity without consuming any fossil or nuclear produced fuels
- ⊕ Delivers 100% zero emissions
- ⊕ Average size for a household, the size of a standard dishwasher or washing machine
- ⊕ 8¢ per kWh consumed, no other charges or costs, contracted direct from factory
- ⊕ Retail \$1 – 2,000 per unit if bought manufactured by other licensed Whitegoods Brands

### **We are going to openly license the MAPS technology so that:**

1. It is mass manufactured by the members of the international Major Appliance Manufacturers Industry (“MAMI”) and distributed under a variety of their Whitegoods / Whiteware Brands.
  - a. Target 1st year SOP, 2019, is to manufacture and distributed at least 100 million Devices through licensed MAMI programmes.
2. License the implementation in Nations so that standards can be maintained, and National Government taxing revenues can be gained on kWh consumed, regardless of the Brand the customers choose to install in their homes and SME.

**International Bain & Company is engaged as our Turnkey Project Managers, and will be responsible for managing the licensing, assisting with establishing production facilities, and they confirm:**

“

- Bain & Company through Joint Head of Global Automotive, Partner Ralf Kalmbach’s Stewardship, will take on the Turnkey Project Management role for the full implementation of the Business Plan.
- FEV GmbH, D-Aachen are the Turnkey Engineering Alliance Partners who report to Ralf Kalmbach, are responsible for delivering the MAPS Devices range to match the Business Plan.

In this we add a uniquely new value-added product to Whitegoods / Whiteware ranges and bring to bear an increased marketplace opportunity of initially more than 2 Billion units for MAMI Members to supply. The principal objective is a wide installation of MAPS globally under multiple Brands, eliminating the need for the National Grid distribution to households and SME, consumers of 120V and 220-40V AC power. No plumbing required. No gas either.

”

Today, local distribution of electricity (or gas) on the Grid, to the retail marketplace, accounts for 90%± of the physical Grid and about 60% demand on central power generation.

Just recently it was reported in an **article “Investors with More than USD 26 Trillion Call for Climate Action ahead of G7 Summit”**, [see Article 04 June 2018](#), brings to the forefront, that with a wide installation of MAPS, that the large bulk of the estimated 23 - 44 USD Trillion isn't going to be needed.

Importantly, this one MAPS technology by itself will deliver the Paris Agreement objective, and then some.

Worth repeating, of the USD 23 - 44 Trillion estimated under a new division of capital (WEO 2016 page 22), isn't largely needed if MAPS technology is adopted by Nation Parties as the preferred energy delivery technology in their countries, for all 120 & 220-240V AC power.

We will recommend the technology and implementation programme to the MAMI Membership and the Brands, and hereby we give your organisation the first opportunity to raise the bar on the achieving climate change goals, and introduce to your Associations and Membership.

We are prepared to work with and through your organisation to your Associations and Membership.

Please confirm your interest, and given a desire to go forward with us, we would then arrange a full introduction of our technology and Bain & Company's Ralf Kalmbach as the first step of alignment.

That introduction will take place in Munich at Bain & Company at a date to be announced soon. Thank you.

Yours truly,  
**Geoffrey Leslie**  
Chairman
